PRIMAVERA UNIFIER COURSES

Oracle Primavera Unifier is a cloud-based project controls and asset lifecycle management platform. It is primarily designed for large-scale capital construction and infrastructure projects, helping organizations manage budgets, contracts, workflows, and facilities from initial planning through to operations.

Pre-requisite: A knowledge of Windows™

Course Length: 2 - 5 Days

Courses Offered:

- Design & Configuration Training (5 Days)
- Reporting & Dashboards Training (2 Days)
- Primavera Unifier Administration Training (2 Days)

What you will learn on this course:

- Design solutions following best design practices
- Create Data Structures, shells, business processes and attribute shells
- Add functionality to forms, such as consolidation of line items, validation, auto-population, and link elements
- Workflow creation, Business Process Creation, Auto Population, Bundle Package creation and deployment
